

Scalable Vector Graphics (SVG) - A Hands-on Introduction

Practical Session 2 - Attributes

Things to Try

- Embellish the shapes created in the first practical, for example:
 - use gradient fill or radial fill to shade the superstructure of the boat
 - draw a simple flag shape (e.g. rectangle with a cross - draw the cross using line elements), and experiment with different line styles and clipping to produce the desired effect
 - shade the dolphin in a similar way
 - add some text to the composite image - for example, the name of the river, following the path of the river; explore the effects of the different text attributes

The figure below shows a simple flag shape, constructed from a rectangle and two wide (and clipped) lines.
